Ideation Phase
Define the Problem Statements

Date	27 October 2026
Team ID	
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Analysis
Maximum Marks	2 Marks

Customer Problem Statement Template:

I am	Describe customer with 3-4 key characteristics - *who are they?*	A data analyst or researcher studying global fuel markets
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	Compare petrol, diesel and LPG prices across countries and over time, and relate prices to Brent crude oil and taxation.
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Fuel-price data is spread across countries, dates and fuel types, making comparisons difficult.
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Prices, tax percentages, subsidy levels and crude-oil trends need to be considered together.
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Uncertain about the main trends and which countries or periods need closer analysis.

Example:

I am	I?m trying to	But	Because	
A fuel-price researcher	Compare fuel prices globally	Data spans many countries	Taxes and subsidies vary by location	Uncertain about price patterns

Problem	I am	I'm trying to	But	Because	Which makes me feel

Statement (PS)	(Customer)				
PS-1	A data analyst or researcher studying global fuel markets	compare petrol, diesel and LPG prices across countries and over time, and understand how prices relate to Brent crude oil and taxation	fuel-price data is spread across many countries, dates and fuel types, making comparisons difficult	price levels, tax percentages, subsidy levels and crude-oil trends need to be viewed together to understand differences	uncertain about the main trends and which countries or periods need closer analysis
PS-2	A policymaker, energy researcher or informed consumer	understand how fuel prices differ by region and income level and how taxation and subsidies may be associated with those differences	raw tables alone do not clearly show patterns, comparisons or long-term changes	large datasets are difficult to interpret quickly without clear visual summaries and consistent comparisons	less confident making evidence-informed comparisons or explaining fuel-price patterns
