Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	27 October 2026
Team ID	
Project Name	Global Fuel Prices and Taxation Trends: A Comprehensive Analysis
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution. These requirements describe the analysis and reporting capabilities delivered through the prepared fuel-price dataset and Tableau workbook.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority
1	Data Access & Integration	Load the global fuel-price CSV containing date, country, region, income level, subsidy level, petrol, diesel, LPG, Brent crude price and tax percentage into Tableau for analysis.	High
2	Data Processing	Check field types and date values; use consistent numeric measures and dimensions; prepare the data for country, time, fuel-type, region and income-level comparisons. No missing or exact duplicate rows were identified in the supplied dataset.	High
3	Business Analysis	Calculate and compare average petrol, diesel and LPG prices; examine tax percentages and subsidy levels; analyse changes over time and compare fuel-price trends with Brent crude oil prices.	High
4	Business Insights & Analytical Outputs	Provide country-level comparison charts, global fuel-price trend charts, fuel-type comparisons, tax and subsidy analysis, income-level comparisons, and a consolidated Tableau dashboard and Story.	High
5	User Interaction & Analysis	Allow viewers to explore the available charts and compare countries, dates, fuel types, regions and income levels using the filters and interactions supported by the published Tableau views.	Medium
6	Data Update & Reporting	Present results from the current dataset and provide a shareable Tableau Public dashboard and Story for review. Refresh the analysis when an updated dataset is supplied and the workbook is republished.	Medium

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Charts should use clear titles, readable labels, legends and consistent units so that viewers can interpret comparisons with minimal guidance.
NFR-2	Security	The dashboard is published on Tableau Public; therefore, only data suitable for public viewing should be included. Do not publish private or confidential information.

NFR No.	Non-Functional Requirement	Description
NFR-3	Reliability	Charts and dashboard values should be based on the supplied dataset and consistent field definitions; verify that visuals render and values are sensible before sharing.
NFR-4	Performance	Keep views focused and avoid unnecessary visual complexity so the workbook remains practical to open and explore.
NFR-5	Availability	Provide the published Tableau Public link so viewers can access the dashboard and Story online, subject to platform availability.
NFR-6	Scalability	The analysis structure should allow a refreshed or expanded dataset to be reconnected, with field mappings and calculations checked before updating the workbook.
